

Environmental Burden of Disease Assessment (Environmental Science and Technology Library)

This publication characterizes the environmental burden of disease in the United Arab Emirates (UAE), measured by the excess number of deaths and illnesses in the population due to exposure to environmental hazards. The robust methods used in this risk analysis can be applied to any country or region. This publication documents the systematic, multi-step process used to identify environmental priorities and the detailed methods used to quantify the disease burden attributable to each risk. Based on the results of the burden of disease assessment, the publication summarizes the subsequent steps that are recommended to further reduce the burden of disease resulting from various environmental risk factors.

Authors and Contributors

This book represents the synthesis of research carried out by a large, interdisciplinary team from several institutions and multiple nations between June 2008 and June 2011. The lead authors are responsible for weaving together the pieces prepared by the team. Nonetheless, this book would not have been possible without major contributions from each team member. The list below shows contributors to each chapter. Following this list are biographies of all of the authors and contributors.

Lead Authors Jacqueline MacDonald Gibson, Frederic J. P. Launay, Jens T. W. Thomsen, Angela Brammer, Christopher Davidson
